Table Searches 1

Each grid is related to the incomplete multiplication table below it. Complete the multiplication table; find each statement of the table in the grid and draw a line around it; then tick it off in the table. The statement may run up and down, across or diagonally, and may be read in any direction. Any number or symbol in the grid may be used more than once in different statements.

Table Searches 7

Each search grid is related to the three multiplication tables named. Many (but not all) of the statements from those multiplication tables can be found in the grid. Some occur more than once. Find the statements which are in the grid; draw a line around each as it is found and write it down on a list beside the grid. When a statement is found more than once, show additional ones with a tick. Normal search grid rules apply.

Table Searches 9

Each search grid is related to the four multiplication tables given beside it. Many (but not all) of the statements from those multiplication tables can be found in the grid. Some occur more than once. Find the statements which are in the grid; draw a line around each as it is found and mark it with a tick in the table. Normal search grid rules apply.

Table Search 10

The search grid is related to the multiplication tables. ALL of the statements (except one) given in the multiplication tables at the bottom can be found in the grid. Some occur more than once. Find the statements which are in the grid; draw a line around each as it is found and tick it off in the table. Normal search rules apply.
